Submitted as a phase-wise project submission.

1. Project Overview

AI StudyBuddy is a web-based study support backend using Node.js, Express.js, MongoDB, JWT authentication and Gemini API configuration. The supplied evidence demonstrates successful setup, authentication, material upload and AI-assisted learning-resource generation.

2. Implementation Summary

- Environment variables configure MongoDB, JWT and Gemini integration.
- The backend starts through npm start and connects to MongoDB.
- Student and administrator roles are supported.
- REST APIs provide authentication, material and AI-learning operations.
- The AI endpoints demonstrated in the supplied screenshots return summaries, flashcards, quizzes and study plans.

3. Key Evidence

Figure 7.1: Server and MongoDB connection evidence.

Figure 7.2: AI summary generation evidence.

Figure 7.3: Personalized study-plan generation evidence.

4. Security Note

The .env file contains secrets and must remain private. API keys, passwords, JWT secrets, database credentials and live access tokens should not be uploaded to a public GitHub repository.

5. Conclusion

The submitted evidence shows a functioning AI StudyBuddy backend with successful setup and API execution. The documentation is organized phase-wise for project submission.
